

◆ Axis 0 → Rows

Used for: Operations that go downwards, across rows

✚ Example: `df.mean(axis=0)` → Mean of each column

---

◆ Axis 1 → Columns

Used for: Operations that go sideways, across columns

✚ Example: `df.mean(axis=1)` → Mean of each row

---

So:

- Use `axis=0` when applying functions column-wise
- Use `axis=1` when applying functions row-wise
