

EMOTION

What Are Emotions?

- Mental and physiological state
Triggered by situations, thoughts, or external stimuli
- Affect feeling, behavior, and bodily responses
- Short-lived, intense, and reactive
- Visible through facial expressions and body language

Components of Emotion

- Physiological Arousal (e.g. heart rate, sweating)
- Cognitive Interpretation (how we understand the situation)
- Subjective Feeling (internal experience like joy, anger)
- Behavioral Expression (smile, cry, shout, etc.)

8 Basic Emotions (Robert Plutchik)

Anger - To fight against problems

Joy To remind us of what's important

Anticipation To plan and look forward

Fear To protect from danger

Trust To bond with helpful people

Sadness To reject harmful elements

Expression of Emotions

- **Verbal Expression**

Through words and tone of voice

- **Nonverbal Expression**

Facial Expressions – Primary way to express (smile, frown)

Body Language – Posture, gestures, body movement

Context – Shapes how expression is perceived

Criticism – Disapproval reflecting negative emotion

Social Referencing – Infants observe others to decide emotional reaction

Smile – Universal symbol of pleasure or approval

- **Cultural Influence on Emotions**

Cultural Expression

Different cultures have distinct

emotional display rules in collectivist cultures)

Different cultures have distinct emotional display rules (e.g. shame

Cross-Cultural Universals

Basic expressions like happiness, fear, sadness, surprise are universal

Emotional Arousal

Heightened physical and emotional state

Examples:

- Fight or Flight or Freeze
- Situations like stage fright, danger, conflict
- Affects performance, decision-making, memory

Major Theories of Emotion

1. James-Lange Theory

Emotions are the result of bodily changes

2. Sequence: Stimulus → Physiological Reaction → Emotion

Stimulus:
Public speaking
Body Reaction:
Heart rate ↑, sweating
Emotion:
Anxiety 

Supports Facial Feedback Hypothesis:

2. Cannon-Bard Theory (Mentioned for contrast:) Expressions influence emotional experience

3. Schachter-Singer Two-Factor Theory (Optional addition)
Emotion = Physiological Arousal + Cognitive Label

Practical Applications

- **Mental Health:** Managing emotions in disorders (anxiety, depression)
- **Communication:** Interpreting others' emotions accurately
- **Emotional Intelligence (EQ):** Understanding and regulating own emotions

MOTIVATION

- What is Motivation?

Origin: From Latin "movere"
meaning "to move"

Definition: A need or desire that energizes, directs, and sustains behavior toward a goal

Concerned with:

- Starting behavior
- Directing behavior
- Maintaining behavior

- Types of Motivation

- > Intrinsic Motivation

Comes from within

Done for personal satisfaction, interest, or enjoyment

- > Extrinsic Motivation

Comes from external sources

Driven by rewards or to avoid punishment

Quadrant Model of Motivation

	Internal Motivation	External Motivation
Positive (Pleasure)		Gain Rewards 
Negative (Pain)	Avoid Feeling Bad	Avoid Punishment 

• Motives (Drivers of Motivation)

→ Primary (Biological)

Hunger

Thirst

Temperature Regulation

Pain Reduction

→ General Motives

Achievement

Aggression

Exploration/Manipulation

Secondary (Social & Psychological)

Social Comparison & Approval

Affiliation

Self-Actualization

Exploration/Manipulation

Principles of Motivation

Purpose - Seeking meaning in work or life

Belonging - Need for inclusion, safety, and morale

Positive Environment - Encourages teamwork and motivation

Autonomy - Independence improves accountability and trust

Growth - Opportunity for skill development

Recognition - Being acknowledged boosts effort and morale

- Major Theories of Motivation

1. McClelland's Theory of Needs

Every person has one dominant motivator:

Need for Achievement

- Likes challenges and calculated risks
- Seeks feedback
- Prefers working alone

Need for Affiliation

- Wants social interaction and harmony
- Avoids conflict and risk
- Favors teamwork

Need for Power

Desires influence and control

Need for Power

- Desires influence and leadership

Maslow's Hierarchy of Needs

Humans fulfill needs in a specific order, from basic to advanced

Categories:

Basic Needs →

Physiological & Safety

Self-Fulfillment Needs →

Self-Actualization

Applications of Motivation in Real Life

- Education – Enhancing learning through goal-setting and rewards ✓
- Workplace – Boosting productivity via recognition and autonomy 😞
- Mental Health – Motivation therapy for depression, addiction, etc. ↗
- Personal Growth – Achieving goals, building habits

INTELLIGENCE

What is Intelligence?

- Learn from experience
- Adapt to the environment
- Solve complex problems
- Derive meaning and reason
- Make sound decisions

- Types of Intelligence (Howard Gardner's Multiple Intelligences)

→ 1. Linguistic Intelligence

Sensitivity to spoken and written language

→ Effective communication and word use

→ 3. Spatial Intelligence

Visualizing and mentally manipulating 3D space Good with maps, puzzles, design

→ 4. Bodily-Kinesthetic Intelligence

Coordination between mind and body
Skilled in physical movement and control

→ 8. Naturalist Intelligence

Strong innding of nature and living things
Classifying flora, fauna,

→ 2. Logical-Mathematical Intelligence

Ability to reason logically
Quantifying, pattern recognition, problem-solving

→ 5. Musical Intelligence

Understanding pitch, tone, rhythm
Skilled in music creation and recognition

→ 7. Intrapersonal Intelligence

Self-awareness and emotional understanding

9. Existential Intelligence

Deep thinking about life, death, and existence

Intelligence Quotient (IQ)

► What is IQ?

IQ = Intelligence Quotient

Measures reasoning, problem-solving, and logic

Measures reasoning, problem-solving, logic

Evaluated through standardized IQ tests

► Ways to Increase IQ

Read daily & finish at least 2 books a week

Practice memory activities (games, recall drills)

Engage in visuospatial reasoning (3D puzzles)

Play musical instruments

Prioritize sleep and healthy lifestyle

Solve jigsaw/crossword puzzles, Rubik's Cube

Learn new languages

Exercise regularly (cardio boosts brain function)

Continuously upgrade your skills and education

• Emotional Intelligence (EI/EQ)

► What is Emotional Intelligence?

The ability to understand, use, and manage emotions in positive ways

Helps in:

- Relieving stress
- Effective communication
- Conflict resolution
- Empathy and self-regulation

Five Components of EI

1. Self-Awareness – Recognize your own emotions
2. Self-Regulation – Control reactions and adapt
3. Motivation/Decision-Making – Pursue goals, make sound choices

Ways to Improve Emotional Intelligence

- Observe and name your emotions

- Keep a journal or diary

- Practice empathy: "Wear someone else's shoes"

- Take feedback and reflect on it

- Listen actively and respond calmly

Be open to discomfort and realistic about outcomes

- Develop self-awareness and emotional triggers

- Improve social awareness and communication skills

- **Comparison: IQ vs EQ**

Intelligence Type	What it	Focus Area
IQ Logical reasoning	Logic & problem solving	Mental abilities
EQ Emotional understanding	Emotions & relationships	Emotions & relationships
