

COGNITIVE BEHAVIORAL THERAPY

Psychotherapy to identify and change unhelpful thoughts, emotions, and behaviors

KEY CONCEPTS

Thoughts → Feelings → Behaviors (influence each other)

5 STEPS TO CHANGE THINKING

- Make a list - Identify troubling thoughts
- Record thoughts - Journal unproductive patterns
- Read replacement thoughts Positive alternatives

GOALS

- Break negative thought patterns
- Use self-help strategies
- Commonly used for depression & anxiety

THERAPY

BEHAVIORAL THERAPY

- Focuses on changing learned harmful behaviors

Key Features

- Behavior is learned and changeable

- Present-focused (not deep emotional causes)

- Common for phobias, OCD

STEPS in BEHAVIORAL THERAPY

- Identify the problem
- Apply behavioral techniques
- Implement the plan
- Assess progress

3 C's Technique

- 😊 Catch it - Notice behavior
- 😊 Check it - Is it helpful or harmful?
- 😊 Change it - Replace with constructive alternative

ROLES & BENEFITS OF COUNSELLING

WHAT ARE EMOTIONS?

mental + physiological states

triggered by events or thoughts

Affect feeling, behavior, body responses

Intense but short-lived
Seen in facial expressions + body language

Sadness

Connection to loss

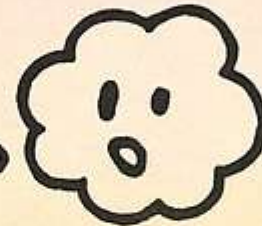

Disgust

Avoid harmful things

EMOTION

COMPONENTS OF EMOTION

physiological arousal
(eg. sweating, heart rate)

cognitive interpretation
(situation analysis)

subjective feeling
(joy, anger, etc.)

behavioral expression
(cry, shout, smile)

8 BASIC EMOTIONS (PLUTCHIK)

Anger – fight against problems

Anticipation – planning, excitement

Joy – motivation

Trust – social bonding

Fear – safety/danger signal

Surprise – awareness of change

Humna Imran

EXPRESSION & CULTURE IN EMOTION

Expression of Emotion

Verbal Expression
(tone, words)

Nonverbal Expression

Facial expressions

Body language

Context shapes perception

Criticism = disapproval

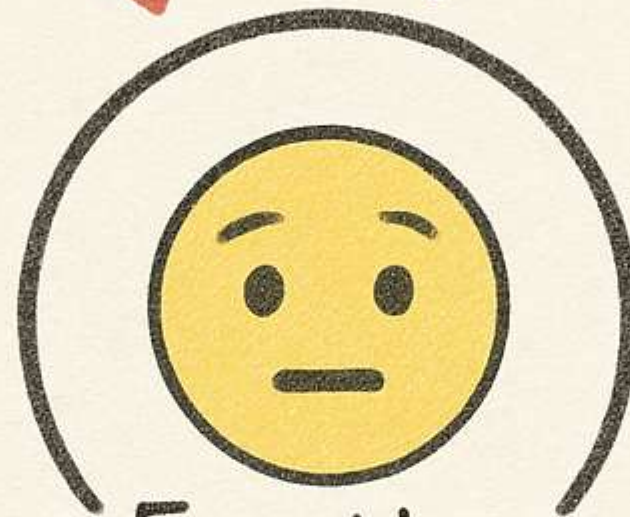

Social referencing in infants

Smile = universal approval

Voluntary control of emotions

Emotion

Cultural Influence

Cultural Display Rules
(what to express)

Functions: Maintain harmony,
e.g. shame in collectivist
cultures

Universals: Basic emotions
like joy, fear, sadness

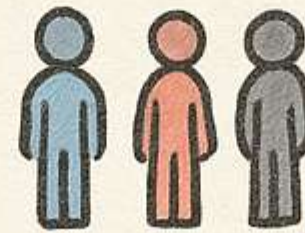

Emotional Arousal

Fight/flight/Freeze

Examples: stage fright,
arguments, danger

Affects decision-making,
memory, behavior

THEORIES OF EMOTION

James-Lange Theory

Stimulus → Body Reaction

→ Emotion

Example:

Public speaking

→ Sweating → Anxiety

Supports Facial Feedback Hypothesis 

Cannon-Bard Theory

Body + Emotion happen together

Schachter-Singer Theory

Emotion = Arousal + Label

I'm excited!

Practical Applications

- Mental Health: emotion regulation 

- Communication: recognizing others' emotions 

- Emotional Intelligence: awareness + control
